SUMMARY

Full stack developer with 10 months of hands-on internship experience building and debugging web applications using React and JavaScript. Practical experience integrating REST APIs with Axios, managing application state with Redux Toolkit, and implementing CRUD functionality with asynchronous data handling. Comfortable working across the frontend development lifecycle, from component design through deployment and debugging.

TECHNICAL SKILLS

Languages: JavaScript, HTML, CSS

Frontend: React, React Hooks (useState, useEffect, useRef, useReducer), Context API, Component-Based Architecture, Responsive Web Development

State Management: Redux, Redux Toolkit (createSlice, createAsyncThunk), Centralized State Management

API & Data: REST APIs, Axios, CRUD Operations, JSON Server, Asynchronous Requests, API Error Handling

Tools & Deployment: Git, GitHub, Vercel, Render

EXPERIENCE

Full Stack Developer Intern (Python Developer Intern)

[LOCATION]

Betterinu [INTERNSHIP START DATE] – [INTERNSHIP END DATE] (10 months)

- Developed and debugged web application features using React and JavaScript, implementing reusable, state-driven components and conditional/dynamic rendering.
- Integrated REST APIs using Axios to retrieve and update application data, handling asynchronous requests, loading states, and error states.
- Implemented CRUD functionality across frontend components, working with props, state, and event handling to keep the UI in sync with underlying data.
- Used Git and GitHub for version control and collaborated with team members throughout the development process.
- Worked through debugging of frontend/backend connectivity issues, including API base URL configuration and environment-specific network errors.

PROJECTS

User Admin System

React, Redux Toolkit, Axios, JSON Server

- Built a user administration interface in React, using Redux Toolkit (createSlice, createAsyncThunk) for centralized state management of asynchronous CRUD operations.
- Created an Axios-based API service layer to communicate with a JSON Server backend, including handling of loading and error states.
- Implemented pagination and data-handling logic for managing user records within the application.
- Deployed the frontend to Vercel and explored backend deployment on Render, debugging frontend/backend separation issues including environment variables, API base URLs, and localhost-to-production network errors.

MediConnect

React, TypeScript, Django REST Framework, MongoDB

- Built a health-management platform with a React/TypeScript frontend and a Django REST Framework backend, featuring role-based dashboards for patients, clinicians, and administrators.
- Implemented features including a symptom checker, doctor/hospital directory with location-based search, appointment booking, teleconsultation, and health record management.
- Implemented authentication using JWT and bcrypt, with MongoDB-based data handling.
- Debugged issues involving database migrations, API integration, and database connections.

EDUCATION

Bachelor of Computer Applications (BCA)

2023 – 2026

Al Jamia Arts and Science College, Perinthalmanna
